# Unlock rapid value with AIOps

Implement a powerful platform to achieve measurable results that support your IT and business goals.

Although AI is reshaping industries, many organizations struggle to measure value, especially in AIOps. With the right platform, you can quickly drive efficiencies by reducing alert noise and helping IT teams focus on critical incidents. The result? Faster issue resolution and improved operations.[1]

80%
noise reduction in the first eight weeks of implementation.

25%
faster MTTR in the first 90 days.

80%
compression of events into actionable incidents.

Key steps to AIOps results

Achieving these results requires proper preparation. Identify your infrastructure and business goals to tailor your approach so you can optimize the benefits for incident response teams and greater service reliability.

- Establish baseline metrics for effective implementation tracking.
- Align with critical stakeholders early on and communicate expectations and progress regularly.
- Start with a core set of data sources for measurable impact.
- Enrich alerts, correlate incidents, and drive actionable outcomes.

Gamma

"Within two weeks, we had a substantial reduction in alerts — and better alerts."

Dan Bartram
Head of Automation and Monitoring, Gamma

AIOps offers tangible value by streamlining operations, reducing noise, and enabling faster incident resolution. Implement BigPanda to unlock the potential of AI and create meaningful improvements across IT teams.
